Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-6, 13-14, 16-18, drawn to control of refrigerant flow to a plurality of evaporators, classified in Class 62, subclass 199.

II. Claims 7-12, drawn to fan control, classified in Class 62, subclass 179.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the invention in Group I as recited in claim 13 has separate utility such as in a system that does not have the activation of the freezer fan until Δt_z reduces to a first predetermined temperature difference of Group II and the invention in Group II as recited in claim 7 has separate utility such as in a system that does not have the three-way valve having three operational positions of Group I. See M.P.E.P. § 806.05(d).

Claim 15 will be examined along with the claims of either elected group.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the search for each group is not required for the other groups restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed.
